

N I S S A N G A Z E L L E

You've never been in better shape.

One look at Gazelle invites you to slip behind its wheel and throw some tough ones at it. Like overtaking road trains. Or deftly negotiating mountain bends. Or emergency stops. Maybe even tight parking spots. But you'll find that Gazelle will easily take these challenges in its long stride... and beat them.

McPherson Strut front suspension, independent rear suspension with four wheel disc brakes ensure the steel radials stick safely to just about all road surfaces with ample stopping power. While revised gearing has improved on road performance.

Take a good look around you as you snuggle into your body hugging, 3-way adjustable bucket seat. Instrumentation is clear and comprehensive and monitors all major functions. The soft-padded steering wheel is tilt-adjustable.

Your personal entertainment centre delivers superb

performance through a genuine hi-fidelity AM/FM stereo radio/cassette with

Dolby NR. In the liftback there are four speakers. In the coupe, there are no less than six!

There's even a "Diversity" antenna to help maintain constant FM signal strength.

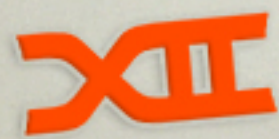

No comfort or convenience item has been overlooked. There's a footrest. Power-operated exterior mirrors. Remote fuel and boot/liftback release. The rear window is heated and, on

the Liftback, a broad-sweeping wiper/washer is added. The Liftback also features split-

fold rear seats for optimum luggage capacity. Load restraining straps are

also included. Whilst, in the Coupe, convenience even runs

to time delay interior lights.

GAZELLE SPECIFICATIONS

Lightweight, fuel-injected powerplant.

Gazelle's feisty performance stems directly from Nissan's development of lightweight, fuel efficient engines. Gazelle has the very latest 2.0 litre electronically fuel-injected 4 cylinder OHC engine with dual ignition. (Simply, dual ignition means having two spark plugs per cylinder. This provides more efficient combustion, a faster burn, resulting in better fuel economy and performance.) This, combined with the use of lightweight alloys, semi-spherical combustion chambers and cross flow cylinder head help achieve an outstanding level of power and torque.

In transmissions, a smooth 5-speed manual with 5th gear overdrive is standard. The optional 4-speed overdrive automatic incorporates a "lock-up" torque converter. In overdrive the torque converter "locks-up" so that the drive is direct from engine to transmission. This eliminates conventional automatic slippage, reducing engine speed to improve fuel economy.

SPECIFICATIONS
